Remarks

When you see the desired router simply click onto the associated row to view details and available **downloads**.

For the supported status the following shortcuts apply:

- yes** - the router is supported
- wip** - work in progress, router support is in the works, but please don't ask how long it takes, we cannot give you a schedule in the most cases.
- no** - the router can be supported but is currently not and is not in the works
- not possible** - because of technical issues router support is not possible

Routers marked with "**Activation required**" are professional platforms that require an activation key for productive use. Licenses can be purchased in the [DD-WRT Shop](#)
